

PUMPSPY

1. Unplug the old controller from AC power
2. Disconnect all connections on the back of the unit.
3. Open the battery case and disconnect from the battery.
4. Connect your new controller to battery and close lid.
5. Reconnect all connections to the new controller (including your primary pump).
6. Plug the new controller into AC power.

7. Download the WiFi PumpSpy app (purple icon) on your phone.
8. Login to your PumpSpy account and connect the new unit to your WiFi network.
Detailed instructions on WiFi connecting are in the owners manual.
